Art Unit: 3736

1. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

2. Claims 1-51 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

3. In claims 16-17, 20, 29, 32, 45, 47 and 49-51 the use of "can be" is indefinite in that it is unclear whether what follows is actually a claimed limitation or not. All that states is that it can be, it doesn't positively set forth that it is. Claims 6-7 fail to provide any structural limitations of the device and merely contain language directed to the intended use. Regarding claim 14, the phrase "umbrella -like" renders the claim(s) indefinite because the claim(s) include(s) elements not actually disclosed (those encompassed by "-like"), thereby rendering the scope of the claim(s) unascertainable. See MPEP § 2173.05(d). In claim 25, "the upper inductor coil" and "the lower inductor coil" lack positive antecedent basis, claim 1 merely recites an inductor. In claim 27, "an array of smaller capacitors" also lacks positive antecedent basis.

4. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Art Unit: 3736

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

5. Claims 50-51 are rejected under 35 U.S.C. 102(e) as being clearly anticipated by Darrow et al.

Darrow et al discloses an implantable medical sensor system and teaches a "read out device" or telemetry device (18, 39, 59) and clearly shows, column 5, lines 10-12, that the external device is portable and may be hand held that is used to read the signals from the implanted sensor and also teaches, column 4, lines 7-10, that the device can use multiple sensors.

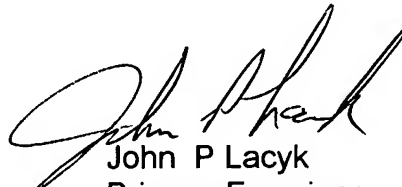

6. Claims 1-30 are rejected under 35 U.S.C. 102(b) as being clearly anticipated by Allen et al.

Allen et al discloses the claimed device of a flexible sensor having a capacitor and an inductor which measures pressure. Applicant's specification, page 12, lines 3-10, further states that the pressure sensor of the invention can be manufactured using micro-machining techniques and an example of this type of sensor is described in Allen et al, clearly showing that the claimed sensor is already well known in the art.

7. Claims 31-49 would be allowable if rewritten to overcome the rejection(s) under 35 U.S.C. 112, second paragraph, set forth in this Office action and to include all of the limitations of the base claim and any intervening claims.
